

Digital Knowledge Platform

What do initiatives in the field of sustainability think about establishing a Shared Digital Knowledge Platform?

Combining knowledge, resources and the public into one shared online space, open to everyone, is efficient

Connecting people with experts in the field of sustainability through an online platform, eliminates the burden of being in different places

A digital shared knowledge platform could potentially be an interactive, inclusive and accessible space to many

Organizing sustainable events in the global pandemic is not possible, an online educational space would be safe

Hard to reach people that are not already involved in sustainability

Small sustainable initiatives might be hesitant to collaborate with bigger players

Adaptation to digital world requires a different way of working

Loss of face to face interactions makes it harder to capture individual stories

Loss of locality

Privacy and data integrity should be guaranteed

Method

The data to answer the research question was obtained by conducting semi-structured interviews with fesa e.V., Foodsharing Basel, Natürlich Unverpackt and Nachhaltigkeitsmanagement Freiburg.
