

Hybrid Seminar: Sustainable Eucor Cities? Exploring Your City Through the Lens of the Sustainable Development Goals (SDGs). Mapping – Analysis – Action.

The United Nations 2030 Agenda with its 17 Sustainable Development Goals (SDGs) and 169 sub-goals forms the framework for realizing a future-proof and sustainable society. In order to make the goals set by the global community for all countries more tangible, they are introduced in this course as a tool for analyzing developments in your own city. Where does the relevance of certain SDGs become particularly tangible? Where can the SDGs be used to observe developments towards sustainability, where can grievances be revealed? Where and in what way can each and every individual take action to implement the SDGs? These questions are at the heart of the course. The aim of the course is to develop a guideline for the elaboration of SDG city exploration tours by students for students in the Eucor cities and to develop and test prototypes of these tours. Find a detailed course description [here](#).
